Just a few lines of code.

HOWTO: Install and use browscap respectively get_browser() for PHP on Ubuntu (Debian)

NOVEMBER 20, 2012 [LEAVE A COMMENT \(HTTPS://REWGAZ.WORDPRESS.COM/2012/11/20/HOWTO-INSTALL-AND-USE-BROWSCAP-RESPECTIVELY-GET_BROWSER-FOR-PHP-ON-UBUNTU-DEBIAN/#RESPOND\)](https://rewgaz.wordpress.com/2012/11/20/howto-install-and-use-browscap-respectively-get_browser-for-php-on-ubuntu-debian/#RESPOND)

PHP Manual: <http://php.net/manual/en/function.get-browser.php> (<http://php.net/manual/en/function.get-browser.php>)

```
$browser = get_browser($_SERVER['HTTP_USER_AGENT'], true);  
print_r($browser);
```

Download: [php_browscap.ini](http://tempdownloads.browserscap.com/stream.php?PHP_BrowsCapINI) (http://tempdownloads.browserscap.com/stream.php?PHP_BrowsCapINI) (<http://tempdownloads.browserscap.com/>)

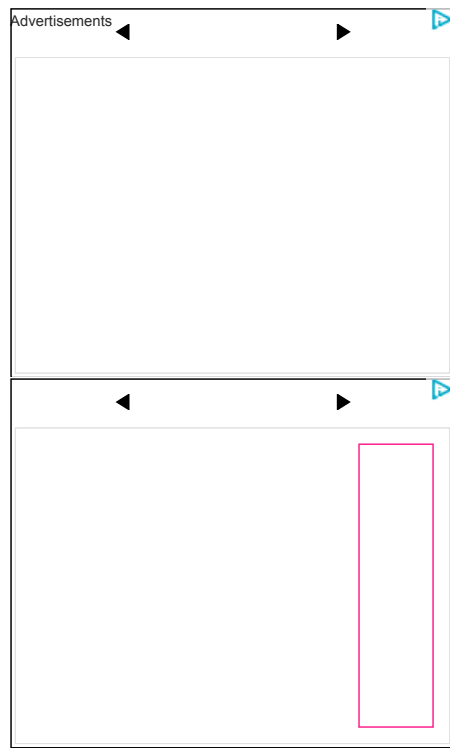

You can put the file anywhere. I placed it here: `/etc/php5/apache2/php_browscap.ini`

Edit your: `php.ini`

```
[browscap]  
; http://php.net/browscap (http://php.net/browscap)  
browscap = "/etc/php5/apache2/php_browscap.ini"
```
