How to place div at the bottom of another div?

Hi,

Pleas take a look at this : http://jsfiddle.net/snowman/hxXJh/

How do I place the adInfoBox1 at the bottom of the container?

Pleas note that the container will not have a fixed height.

BestRegards **strong text**

html   css

1   adinfoBox1 is set to expand to the height of it's container, so technically it is at the bottom of the container.
     At least in the link you provided. – edl Mar 17 '11 at 20:10

You can use `position: absolute` .

```
.container
{
    height: 400px;
    position: relative;
}

.adInfoBox1 {
  padding: 5px 5px 5px 10px;
  position: absolute;
  bottom: 0px;
  width: 457px;
  background-color: green;
}

.adRegularList .categoryList {
  bottom: 0;
  height: 16px;
  position: absolute;
}
```

See a working example here: http://jsfiddle.net/hxXJh/5/

I'd suggest:

```
.adInfoBox1 {
    padding: 5px 5px 5px 10px;
    position: absolute;
    bottom: 0; /* attaches the element to the bottom */
    left: 0; /* attaches the element to the left-side */
    right: 0; /* attaches the element to the right-side */
    background-color : green;
}
```

The above will give the `.adInfoBox` 100% width, implicitly. This can be adjusted by removing, or amending, the `right` or `left` declarations. I removed the `float` because using `position: absolute;` will take the element out of the document flow anyway.

JS Fiddle demo.

change the css of `adInfoBox1` to:

```
.adInfoBox1 {
    float: left;
    padding: 5px 5px 5px 10px;
    position: absolute;
    width: 457px;
    background-color : green;
    bottom: 0;
}
```

Simple tricky solution. Div2 will be at the bottom of containerDiv.

```html
<div id="containerDiv">
    <div id="div1" style="heigth:90%;"></div>
    <div id="div2">Content here...</div>
</div>
```
